ALEXANDER VON HUMBOLDT

Friedrich Wilhelm Heinrich Alexander von Humboldt (* 14 September 1769 in Berlin; † 6 May 1859 in Berlin): Wilhelm’s younger brother was a German naturalist active far beyond the boundaries of Europe. In his complete works, which unfurled over a period of over seven decades, he created a “new status of knowledge and reflection regarding the science of the world” and in so doing became one of the co-founders of geography as an empirical science.
